

DATA PLUS HOSPITALITY SOLUTIONS

CMI Fixed Assets

"a better way to calculate depreciation"

Data Plus, Inc. is proud to announce its partnership with CMI Software, Inc. to offer a fully-integrated Fixed Assets solution for our customers. With more than 25 years' experience in providing fixed assets accounting software around the country and a world-class knowledge of depreciation and tax law, we felt CMI Software, Inc. would be perfect fit with Data Plus and our customers.

If you've already tried other fixed assets software packages, you know just how inconsistent and inflexible they can be. CMI Fixed Assets is designed to work the way you are used to working. Built-in customizing options make it natural and comfortable from the very first time you use it. CMI lets you work to your schedule, providing you with the reports and information you want, when you want them, at the intervals you specify.

Turn Your PC Into a Team of Accountants

Preparing asset depreciation schedules can be a tedious, time-consuming process. It demands unreasonable amounts of time, talent and energy, and takes you away from other more profitable activities. CMI Fixed Assets incorporates a logical, menu-driven interface, making it easy to learn and easy to use. With online help screens and numerous edit checks, CMI frees you from unnecessary errors and confusion. CMI Fixed Assets also includes a complete collection of pre-formatted reports which are fully compliant with accounting standards and IRS regulations, eliminating the need to hand-enter depreciation data on tax forms. CMI's Custom Report Builder allows you to quickly format and print custom reports from your database in any configuration you choose. CMI performs even the most complicated calculations with tremendous speed and accuracy, providing support for all tax and accounting depreciation methods. And with the capacity to handle an unlimited number of clients, each with a virtually unlimited number of assets, locations and categories, CMI Fixed Assets is one asset management package you won't have to worry about outgrowing.

Complete Integration with Data Plus

Fixed Assets Depreciation Interface: CMI will generate an interface file that contains depreciation transactions, which can then be imported into Data Plus as a batch of Journal Entries.

Fixed Assets New Item Interface: When a new item is purchased from within AP or Purchasing, Data Plus will directly call upon the CMI application, so that users may enter in their new record, providing seamless integration with CMI.

We'll keep you Updated

Ever feel that you can never keep up with all the tax law changes that seem to be rewritten by the hour? To keep you up-to-date and abreast of all these changes, CMI will automatically notify you of changes and make all updates available to keep your work current and in full compliance with the IRS.
