### **Data Plus Announces Real-time Inventory Interface with SpaSoft 3.1.1**

North Chelmsford, MA – August, 2009 – Data Plus is pleased to announce the release of a certified interface between the DPHS Inventory application and SpaSoft 3.1.1.50. This real-time inventory interface uses a web portal with SOAP and XML messaging to provide two way communication of item and sales data.

Prior to this release, back office communication with point-of-sale occurred on a batch basis and was user driven, so there was a lag time between the point at which items are purchased and when inventory counts were updated. With the new SpaSoft Interface, communication takes place silently, with no user intervention, and inventory counts can be configured to occur at any interval. Data Plus users will have immediate access to accurate inventory counts and sales data directly from SpaSoft.

“Users have been pushing for real-time interfaces of this type for some time in order to have truly seamless communications. We are very pleased to be working with SpaSoft to fully realize the capabilities of both systems,” said Bruce Bensetler, President of Data Plus.

“With this leading edge interface to Data Plus, SpaSoft users will benefit from increased operating efficiencies and reduced costs because it supports a centralized inventory system, streamlines inventory operations and eliminates double entries,” remarked Brigitte Diem-Guy, General Manager of SpaSoft Operations for PSMS, “Clients with inventory spread over a large property or multi-property sites will appreciate the value of this powerful, state-of-the-art interface.”

#### **About Data Plus, Inc.**

Since 1986, Data Plus has been offering the most complete hospitality-specific back office accounting system available in today’s marketplace. The fully-integrated back office suite known as the Data Plus Hospitality Solution is the ultimate back office system because it combines Accounting, Human Resources and Procurement in one complete package. Hotels, restaurants, time-share operators, resorts, and casinos all over the world, varying in size and operational style, rely on their superior applications, system interfaces, and knowledgeable support. Data Plus is able to accommodate both the needs of the single site operator as well as the complex operational needs of an international management company. For more information on Data Plus, please visit their website at [www.dphs.com](http://www.dphs.com).
