

Any number of inventory storerooms can be defined, along with unlimited locations within each storeroom.

Engineered to fit within the suite of our other integrated applications, Inventory shares data with Purchasing/Receiving - saving time by eliminating duplicate data entry and allowing reports to include data from all applications.

The module is also fully integrated with General Ledger, and Purchasing/ Receiving. Thus, we can provide reports which, combine your budget data with expenses and purchase commitments to provide the complete financial management picture you need in one place.

Any number of inventory storerooms can be defined, along with unlimited locations within each storeroom.

The following three inventory costing methods are currently supported:

- Average Cost
- Last Cost
- FIFO (First In, First Out)

FEATURES

Inventory Receipts are automatically generated by the Receiving function in the Purchasing/Receiving module.

Issues / Adjustments, Transfers, and Physical Inventory transactions are used to maintain the perpetual inventory levels. Utilize the export and import interfaces for exchanging data with your POS system.

Drill Down Inquiries - Using windows functionality, all of our Inquiries offer a seamless drilldown feature that lets you get to the core of Item detail.

Item Production - Create Production Order Templates to reflect both the creation of multiple items from one, or combining many items to create a new item with automatic Unit of Measure conversion.

Bar Code Scanning -Enter physical inventory counts through a hand- held scanner and download the item counts into Data Plus. Also print Bar Code labels for any item.

Food & Beverage tracking - Including recipe costing.

OPTIONAL INTERFACES

POS Export / Import Interfaces

Export Item Data from Data Plus to your POS system. Import Inventory

Quantities from your POS system into Data Plus.
